

# THE NETWORK PROTOCOL CHEATSHEET

Riddhi Suryavanshi

<sup>1</sup>University of Delhi, <sup>2</sup>Lucideus Technologies

riddhisuryavanshi11@gmail.com

## I. INTRODUCTION

This document is intended for students and security professionals as a quick reference for networking protocols. It covers 50 protocols classified according to the OSI Layer they operate on. The corresponding RFC has been provided to further check for parameters/commands of a particular protocol. From security perspective, the corresponding attacks/vulnerabilities are also included in this cheatsheet.

## II. KEY TERMS

Protocol, Port, RFC, OSI Layer, Attack, Vulnerability

## III. DEFINITIONS

[1] Protocol- A protocol is a standard set of rules that allow electronic devices to communicate with each other.

[2] Port- A logical construct that identifies a specific process or a type of network service.

[3] RFC- A formal document from the Internet Engineering Task Force that is the result of committee drafting and subsequent review by interested parties.

[4] OSI Layer- One of the seven layers of the Open Systems Interconnection Model that describes how information from a software application in one computer moves through a physical medium to the software application in another computer.

[5] Attack: An information security threat that involves an attempt to obtain, alter, destroy, remove, implant or reveal information without authorized access or permission.

[6] Vulnerability: A flaw in a system that can leave it open to attack.

## IV. ABBREVIATIONS

DoS – Denial of Service

MitM – Man in the Middle

b/w – between

MAC – Media Access Control

VPN – Virtual Private Network

N/W – Network

VoIP – Voice over IP

Aka – Also known as

DROWN – Decrypting RSA using Obsolete and Weakened Encryption

DDoS – Distributed Denial of Service

S No.	PROTOCOL	PORT(s)	TCP/UDP port	RFC	OSI LAYER	DESCRIPTION	ATTACKS/VULNERABILITIES
1	IEEE 802.11	-	-	-	Physical	<ul style="list-style-type: none"> <li>Specifies MAC &amp; physical layer protocols for implementing WLAN Wi-Fi.</li> </ul>	<ul style="list-style-type: none"> <li>DoS by MAC address spoofing</li> </ul>
2	PPTP (Point-to-Point Tunneling Protocol)	1723	Both	2637	Data Link	<ul style="list-style-type: none"> <li>Implements VPN</li> <li>Uses TCP control channel and Generic Routing Encapsulation(GRE)</li> </ul>	<ul style="list-style-type: none"> <li>MitM</li> <li>Bit flipping</li> </ul>
3	L2TP (Layer 2 Tunneling Protocol)	1701	Both	2661, 3931	Data Link	<ul style="list-style-type: none"> <li>Extension of PPP</li> <li>Uses UDP to avoid TCP meltdown problem.</li> </ul>	<ul style="list-style-type: none"> <li>DoS</li> </ul>
4	PPP (Point to Point Protocol)	-	-	1661	Data Link	<ul style="list-style-type: none"> <li>Provides communication b/w 2 routers directly without any host or networking.</li> <li>Provides connection authentication, transmission encryption &amp; compression.</li> </ul>	<ul style="list-style-type: none"> <li>Format string attack</li> </ul>
5	ARP (Address Resolution Protocol)	-	-	826	Layer 2.5	<ul style="list-style-type: none"> <li>Discovers the MAC address.</li> <li>Creates a communication in internal N/W.</li> </ul>	<ul style="list-style-type: none"> <li>ARP cache poisoning</li> </ul>
6	RARP (Reverse Address Resolution Protocol)	-	-	903	Layer 2.5	<ul style="list-style-type: none"> <li>Resolves MAC address to an IP address.</li> </ul>	<ul style="list-style-type: none"> <li>ARP Poisoning</li> </ul>
7	ICMP (Internet Control Message Protocol)	-	-	792	Network	<ul style="list-style-type: none"> <li>Used by ping &amp; traceroute utility to report info. about network connectivity.</li> <li>Uses a data packet with 8-byte header.</li> <li>Each packet has a Type &amp; Code.</li> <li>No port used as N/W software itself interprets all ICMP messages.</li> </ul>	<ul style="list-style-type: none"> <li>Ping sweep</li> <li>Ping flood</li> <li>ICMP tunneling</li> <li>Forged ICMP redirects</li> </ul>
8	IGMP (Internet Group Management Protocol)	-	-	3376	Network	<ul style="list-style-type: none"> <li>Used by TCP/IP suite to achieve dynamic multicasting.</li> <li>Class D IP addresses are used.</li> </ul>	<ul style="list-style-type: none"> <li>DoS</li> </ul>
9	OSPF (Open Shortest Path First)	-	-	2328, 2740	Network	<ul style="list-style-type: none"> <li>Routing protocol for IP networks.</li> <li>Uses link state routing algorithm.</li> <li>Part of interior gateway protocols (IGPs).</li> </ul>	<ul style="list-style-type: none"> <li>DoS</li> <li>Local authentication bypass</li> </ul>
10	NAT (Network Address Translation)	-	-	3022	Network	<ul style="list-style-type: none"> <li>Maps one IP address space to another.</li> <li>Modifies network address in IP header of packets.</li> <li>Helps to conserve global address space.</li> </ul>	<ul style="list-style-type: none"> <li>DoS</li> <li>Interception of internal &amp; external traffic due to improper configuration.</li> </ul>

						<ul style="list-style-type: none"> <li>• Requires 1-to-1 relationship.</li> </ul>	
11	<b>PAT</b> (Port Address Translation)	-	-	-	Network	<ul style="list-style-type: none"> <li>• Aka NAT overloading.</li> <li>• Permits multiple devices on a LAN to be mapped to a single public IP address.</li> <li>• Provides many-to-one relationship.</li> </ul>	<ul style="list-style-type: none"> <li>• Discovery of intranet IP addresses.</li> </ul>
12	<b>IP</b> (Internet Protocol)	-	-	791, 2460	Network	<ul style="list-style-type: none"> <li>• Provides the functions necessary to deliver a datagram from a source to a destination over an interconnected system of networks.</li> <li>• No reliability, flow control &amp; sequencing.</li> </ul>	<ul style="list-style-type: none"> <li>• IP Spoofing</li> </ul>
13	<b>RIP</b> (Routing Information Protocol)	520	UDP	1058, 2080, 2453	Network	<ul style="list-style-type: none"> <li>• Dynamic routing protocol.</li> <li>• Uses hop count to find the best path b/w source &amp; destination.</li> </ul>	<ul style="list-style-type: none"> <li>• DDoS reflection attacks.</li> </ul>
14	<b>IPSEC</b> (IP Security)	1293	Both	2407	Network	<ul style="list-style-type: none"> <li>• Provides data authentication, integrity, and confidentiality.</li> <li>• 3 components: Encapsulating Security Payload, Authentication Header &amp; Internet Key Exchange.</li> </ul>	<ul style="list-style-type: none"> <li>• Bleichenbacher attack</li> </ul>
15	<b>TCP</b> (Transmission Control Protocol)	0-65535	TCP	793	Transport	<ul style="list-style-type: none"> <li>• Connection oriented.</li> <li>• Error checks &amp; reporting.</li> <li>• Acknowledgement.</li> <li>• 20 byte header.</li> </ul>	<ul style="list-style-type: none"> <li>• SYN flooding</li> <li>• TCP Reset</li> <li>• TCP Session hijacking</li> </ul>
16	<b>UDP</b> (User Datagram Protocol)	0-65535	UDP	768	Transport	<ul style="list-style-type: none"> <li>• Connectionless.</li> <li>• Error checks but no reporting.</li> <li>• No acknowledgement.</li> <li>• 8 byte header.</li> </ul>	<ul style="list-style-type: none"> <li>• UDP flood attack.</li> </ul>
17	<b>NETBIOS</b> (N/W Basic Input Output System)	137,138	Both	1001, 1002, 1088	Session	<ul style="list-style-type: none"> <li>• Allows applications on separate computers to communicate over a local area network.</li> <li>• Relies on API.</li> </ul>	<ul style="list-style-type: none"> <li>• Information disclosure</li> <li>• Connection using null sessions</li> </ul>
18	<b>RPC</b> (Remote Procedure Call)	530	Both	1057	Session	<ul style="list-style-type: none"> <li>• Used for interprocess communication in client-server based applications.</li> </ul>	<ul style="list-style-type: none"> <li>• XML-RPC attacks.</li> </ul>
19	<b>SMB</b> (Server Message Block)	139,445	Both	-	Session	<ul style="list-style-type: none"> <li>• Enables user to access file on a server, or other application.</li> <li>• CIFS was its early version.</li> </ul>	<ul style="list-style-type: none"> <li>• Eternal Blue attack</li> <li>• Gives remote access</li> <li>• WannaCry &amp; Petya.</li> </ul>
20	<b>SOCKS</b> (Socket Secure)	1080	Both	1928	Session	<ul style="list-style-type: none"> <li>• Exchanges network packets between a client and server through a proxy server.</li> <li>• No compatibility issues unlike HTTP proxy.</li> </ul>	<ul style="list-style-type: none"> <li>• Arbitrary command execution.</li> <li>• DoS</li> </ul>

21	<b>RTP</b> (Real-time Transport Protocol) , <b>SRTP</b>	16384-32767	Both	3550, 3711	Session	<ul style="list-style-type: none"> <li>• VoIP protocol.</li> <li>• Delivers audio &amp; video over IP networks.</li> </ul>	<ul style="list-style-type: none"> <li>• RTP flooding attack</li> <li>• RTP bleed</li> </ul>
22	<b>SSL</b> (Secure Sockets Layer)	-	-	6101	Presentation	<ul style="list-style-type: none"> <li>• Establishes encrypted communication b/w client &amp; server.</li> <li>• Created by Netscape.</li> </ul>	<ul style="list-style-type: none"> <li>• BEAST</li> <li>• SSL Renegotiation</li> </ul>
23	<b>TLS</b> (Transport Layer Security)	-	-	2246	Presentation	<ul style="list-style-type: none"> <li>• Establishes encrypted communication b/w client &amp; server.</li> <li>• Created by IETF.</li> </ul>	<ul style="list-style-type: none"> <li>• DROWN</li> <li>• ROBOT</li> <li>• POODLE</li> <li>• Heartbleed</li> </ul>
24	<b>Kerberos</b>	88	Both	1964	Presentation	<ul style="list-style-type: none"> <li>• Provides security &amp; authentication.</li> <li>• Uses symmetric key distribution using symmetric encryption to access file server.</li> <li>• Helps nodes to prove their identity to one another.</li> </ul>	<ul style="list-style-type: none"> <li>• DoS</li> <li>• Arbitrary code execution.</li> <li>• Buffer Overflow.</li> </ul>
25	<b>WPA</b> (Wi-Fi Protected Access)	-	-	-	Presentation	<ul style="list-style-type: none"> <li>• Security standard that provides better encryption &amp; authentication than WPA.</li> </ul>	<ul style="list-style-type: none"> <li>• KRACK</li> </ul>
26	<b>MIME</b> (Multipurpose Internet Mail Extensions)	-	-	1521, 1522	Presentation	<ul style="list-style-type: none"> <li>• Supports text in multiple character sets; as well as attachments of audio, video, apps &amp; images.</li> </ul>	<ul style="list-style-type: none"> <li>• XSS using MIME Sniffing</li> </ul>
27	<b>ECHO</b>	7	Both	862	Application	<ul style="list-style-type: none"> <li>• Used for testing &amp; measurement of round trip timings in IP networks.</li> <li>• Server sends back identical copy of the data it received.</li> </ul>	<ul style="list-style-type: none"> <li>• Can perform DoS</li> </ul>
28	<b>DHCP</b> (Dynamic Host Configuration Protocol)	67	UDP	2131, 3315	Application	<ul style="list-style-type: none"> <li>• A network management protocol used to automate the process of configuring devices on IP networks.</li> </ul>	<ul style="list-style-type: none"> <li>• Remote code execution</li> <li>• Bogus DHCP client &amp; server</li> </ul>
29	<b>BOOTP</b> (Bootstrap Protocol)	67,68	Both	951	Application	<ul style="list-style-type: none"> <li>• Older version of DHCP.</li> <li>• Automatically assigns IP address to network devices from a configuration server.</li> </ul>	<ul style="list-style-type: none"> <li>• BootpD</li> <li>• BOOTP server impersonation</li> </ul>
30	<b>HTTP</b> (Hyper Text Transfer Protocol)	80	Both	1945	Application	<ul style="list-style-type: none"> <li>• Used for communication over World Wide Web.</li> </ul>	<ul style="list-style-type: none"> <li>• MitM attack</li> </ul>
31	<b>HTTPS</b> (Hyper Text Transfer Protocol Secure)	443	Both	-	Application	<ul style="list-style-type: none"> <li>• HTTPS with SSL for security.</li> </ul>	<ul style="list-style-type: none"> <li>• SSL Stripping</li> <li>• DROWN attack</li> </ul>
32	<b>FTP</b> (File Transfer Protocol)	20,21	Both	959, 2228	Application	<ul style="list-style-type: none"> <li>• File transfer</li> <li>• Uses TCP, hence file delivery is guaranteed.</li> </ul>	<ul style="list-style-type: none"> <li>• Brute force attack</li> <li>• Packet capture</li> <li>• Anonymous authentication</li> <li>• Directory traversal attack</li> </ul>

33	<b>FTPS</b> (FTP with SSL)	989,990	Both	4217	Application	<ul style="list-style-type: none"> <li>• Uses command channel &amp; opens new connections for data transfer.</li> <li>• Requires a certificate.</li> </ul>	<ul style="list-style-type: none"> <li>• MitM</li> </ul>
34	<b>SFTP</b> (SSH File Transfer Protocol)	22	Both	913	Application	<ul style="list-style-type: none"> <li>• Uses encrypted credentials to authenticate.</li> <li>• SSH keys can also be used to authenticate.</li> </ul>	<ul style="list-style-type: none"> <li>• Brute force attack</li> </ul>
35	<b>POP3</b> (Post Office Protocol)	110,995	Both	937, 1939	Application	<ul style="list-style-type: none"> <li>• Store-and-forward client/server protocol.</li> <li>• Deletes mail on server as soon as user has downloaded it.</li> </ul>	<ul style="list-style-type: none"> <li>• Buffer overflow in POP3 servers can cause DoS.</li> </ul>
36	<b>SSH</b> (Secure Shell)	22	Both	4251	Application	<ul style="list-style-type: none"> <li>• Cryptographic network protocol for operating network services securely over an unsecured network.</li> </ul>	<ul style="list-style-type: none"> <li>• Static SSH keys</li> <li>• Embedded SSH keys can provide backdoor.</li> </ul>
37	<b>Telnet</b> (TELEcommunication NETwork)	23	Both	15, 854, 855	Application	<ul style="list-style-type: none"> <li>• Allows to connect to remote computers over a TCP/IP network.</li> </ul>	<ul style="list-style-type: none"> <li>• Brute force attack</li> <li>• Stealing credentials by sniffing.</li> <li>• SSH and SMTP banner grabbing.</li> </ul>
38	<b>NTP</b> (Network Time Protocol)	123	Both	1059, 1119, 1305	Application	<ul style="list-style-type: none"> <li>• Synchronizes clock among devices.</li> </ul>	<ul style="list-style-type: none"> <li>• NTP Amplification DDoS attack.</li> </ul>
39	<b>IMAP/S</b> (Internet Message Access Protocol)	143; 993	Both	1176, 1730	Application	<ul style="list-style-type: none"> <li>• Allows user to create folders &amp; assign messages to folders.</li> <li>• User can obtain just the message header (useful in low-bandwidth connection).</li> </ul>	<ul style="list-style-type: none"> <li>• Password spraying attacks.</li> </ul>
40	<b>DNS</b> (Domain Name System)	53	Both	1034, 1035	Application	<ul style="list-style-type: none"> <li>• Resolute names in TCP/IP network.</li> </ul>	<ul style="list-style-type: none"> <li>• Typosquatting</li> <li>• DNS Poisoning.</li> </ul>
41	<b>SOAP</b> (Simple Object Access Protocol)	80	Both	-	Application	<ul style="list-style-type: none"> <li>• XML based messaging protocol to exchange info.</li> <li>• Characteristics: extensibility, neutrality &amp; independence.</li> </ul>	<ul style="list-style-type: none"> <li>• SOAP injection</li> <li>• Unauthenticated remote access</li> </ul>
42	<b>SNMP/S</b> (Simple Network Management Protocol)	161; 162	Both	1157, 1441, 2570	Application	<ul style="list-style-type: none"> <li>• Allows network manager to monitor networking equipment &amp; remotely modify settings &amp; configuration.</li> </ul>	<ul style="list-style-type: none"> <li>• Sniffing of plain text password.</li> <li>• Modification of packet header.</li> </ul>
43	<b>SMTP/S</b> (Simple Mail Transfer Protocol)	25; 465	Both; TCP	5321	Application	<ul style="list-style-type: none"> <li>• Transfers mail from sender's mail server to recipient's mail server.</li> </ul>	<ul style="list-style-type: none"> <li>• Account enumeration.</li> <li>• E-mail header disclosures.</li> <li>• Helps find internal IPs.</li> </ul>
44	<b>SNTP</b> (Simple Network Time Protocol)	123		2030, 4330	Application	<ul style="list-style-type: none"> <li>• Used when full implementation of NTP is not needed.</li> <li>• Synchronizes a computer's system time with a server that has already been</li> </ul>	<ul style="list-style-type: none"> <li>• DoS via a crafted NTP packet.</li> </ul>

						synchronized by a source such as a radio, satellite receiver or modem. <ul style="list-style-type: none"> <li>• Supports unicast, multicast and anycast operating modes.</li> </ul>	
45	<b>RFB</b> (Remote Frame Buffer)	5900	Both	6143	Application	<ul style="list-style-type: none"> <li>• Used by VNC (Virtual N/W computing) [only TCP port used]</li> <li>• Graphical desktop sharing system.</li> <li>• Used in technical support.</li> </ul>	<ul style="list-style-type: none"> <li>• Stack buffer overflow.</li> <li>• Information disclosure.</li> </ul>
46	<b>RDP</b> (Remote Desktop Protocol)	3389	Both	-	Application	<ul style="list-style-type: none"> <li>• Provides GUI to connect to another computer.</li> </ul>	<ul style="list-style-type: none"> <li>• Reverse RDP attack.</li> <li>• Sabotage sandboxes.</li> </ul>
47	<b>TFTP</b> (Trivial File Transfer Protocol)	69	Both	1350	Application	<ul style="list-style-type: none"> <li>• A lockstep FTP.</li> <li>• Allows a client to get a file from or put a file onto a remote host.</li> <li>• Simpler than FTP.</li> </ul>	<ul style="list-style-type: none"> <li>• No encryption &amp; authentication.</li> <li>• TFTP server spoofing.</li> </ul>
48	<b>NFS</b> (Network File System)	2049	Both	3530	Application	<ul style="list-style-type: none"> <li>• Allows a user to access files over a computer network much like local storage is accessed.</li> </ul>	<ul style="list-style-type: none"> <li>• Elevation of privilege.</li> <li>• Arbitrary code execution.</li> </ul>
49	<b>SIP/S</b> (Session Initiation Protocol)	5060; 5061	Both; TCP	3261	Application	<ul style="list-style-type: none"> <li>• Used for initiating, maintaining &amp; terminating real-time sessions.</li> <li>• VoIP protocol.</li> </ul>	<ul style="list-style-type: none"> <li>• Registration hijacking.</li> <li>• Message tampering.</li> </ul>
50	<b>LDAP/S</b> (Lightweight Directory Access Protocol)	389; 636	Both	1777, 2253	Application	<ul style="list-style-type: none"> <li>• An open, vendor-neutral, industry standard application protocol for accessing and maintaining distributed directory information services over an IP network.</li> </ul>	<ul style="list-style-type: none"> <li>• LDAP injection</li> <li>• DoS</li> <li>• NULL Base querying</li> </ul>
