INFORMATION SECURITY SOLUTIONS

**CVE 2012-1889 SECURITY UPDATE  
ANALYSIS**

19<sup>TH</sup> JULY 2012

**BRIAN MARIANI & FRÉDÉRIC BOURLA**

- **THE 12<sup>TH</sup> OF JUNE 2012** MICROSOFT PUBLISHED A SECURITY ADVISORY WITH A TEMPORARY FIX RELATED TO THE MSXML CORE SERVICES VULNERABILITY WHICH IS HEAVILY EXPLOITED IN THE WILD.
- **ON JUNE 18<sup>TH</sup> 2012** METASPLOIT RELEASED A WORKING EXPLOIT.
- **ON JUNE 19<sup>TH</sup> 2012** A 100% RELIABLE EXPLOIT FOR INTERNET EXPLORER 6/7/8/9 ON WINDOWS XP/VISTA, AND WINDOWS 7 SP1 WAS PUBLISHED BY METASPLOIT.
- **ON JULY 9<sup>TH</sup> 2012** MICROSOFT FINALLY RELEASED A SECURITY UPDATE IN ORDER TO PATCH THIS VULNERABILITY.

- THIS DOCUMENT IS THE CONTINUATION OF THE PREVIOUS PUBLICATION: [“MICROSOFT XML CORE SERVICES UNINITIALIZED MEMORY VULNERABILITY”](#).
- IN THIS NEW PRESENTATION WE WILL ANALYZE THE SECURITY UPDATE RELEASED ON JULY 9<sup>TH</sup> 2012 WHICH FIXES SEVERAL DLL LIBRARIES, SPECIALLY THE **MSXML3.DLL** ONE.
- THE LAB ENVIRONMENT IS AN **ENGLISH WINDOWS XP SP3** WORKSTATION.
- FOR SIMPLICITY, **ASLR** AND **DEP** SECURITY OPTIONS ARE **DEACTIVATED**.

## MS12-043: Description of the security update for XML Core Services 3.0: July 10, 2012

Article ID: 2719985

[View products that this article applies to.](#)

### Applies to

This article applies to the following:

- Microsoft XML Core Services 3.0 when used with:
  - Windows 7
  - Windows 7 Service Pack 1
  - Windows Server 2008 R2
  - Windows Server 2008 R2 Service Pack 1
  - Windows Server 2008 Service Pack 2
  - Windows Vista Service Pack 2
  - Windows Server 2008 Service Pack 2
  - Windows XP Service Pack 3
  - Windows XP Professional x64 Edition Service Pack 2
  - Windows Server 2003 Service Pack 2

- WE IDENTIFY ALL FILES IMPLIED IN THE SECURITY UPDATE PROCESS WITH MONITORING TOOLS, SUCH AS PROCESS MONITOR. ACTUALLY, THE FILE WHICH INTERESTS US IS THE **MSXML3.DLL** LIBRARY.
- TO SUCCESSFULLY COMPARE UNPATCHED AND PATCHED FILES, WE FIRST MAKE A COPY OF THE UNPATCHED LIBRARY TO AN ANALYSIS DIRECTORY.
- WE APPLY THE SECURITY UPDATE AND WE COPY AGAIN THE PATCHED DLL FILE INTO THE PREVIOUS DIRECTORY, WITH A NEW DESTINATION FILE NAME.

 msxml3.dll	1'079 KB	Application Extension	14.04.2008 05:42
 p_msxml3.dll	1'145 KB	Application Extension	05.06.2012 17:50

- AFTER DOWNLOADING AND APPLYING THE SECURITY UPDATE AND COMPARING THE SIZE OF THIS PARTICULAR FILE, WE CAN NOTICE A TINY DIFFERENCE OF **66 BYTES**.

- **BINARY DIFFING IS A TECHNIQUE FOR PERFORMING AUTOMATED BINARY DIFFERENTIAL ANALYSIS.**
- **THIS BECOMES VERY USEFUL FOR REVERSE ENGINEERING PATCHES AS WELL AS PROGRAM UPDATES.**
- **SOME OF THE AVAILABLE BINARY DIFFING TOOLS ARE:**
  - **BINDIFF**
  - **PATCHDIFF**
  - **DARUMGRIM**
  - **TURBODIFF** 
- **HERE, WE USED TURBODIFF.**

- **TURBODIFF WAS PROGRAMMED BY NICOLÁS ECONOMOU.**
- **IT WAS PRESENTED AT THE ARGENTINIAN SECURITY CONFERENCE EKOPARTY IN 2009.**
- **IT IS A HEURISTIC BASED IDA PLUGIN AIMED FOR BINARY DIFFING.**
- **THIS TOOLS WAS DEVELOPED IN C++.**
- **IT PROVIDES AN ARCHITECTURE INDEPENDENT DIFFING.**

- AFTER ANALYZING THE TWO BINARY FILES, TURBODIFF CREATES AN ANA FILE FROM THE IDA IDB FILE.

- THE AFOREMENTIONED ANA FILE WILL BE USED LATER IN ORDER TO DETECT THE SUSPICIOUS AND CHANGED FUNCTIONS.
- LATER TURBODIFF DISPLAYS ITS RESULTS:

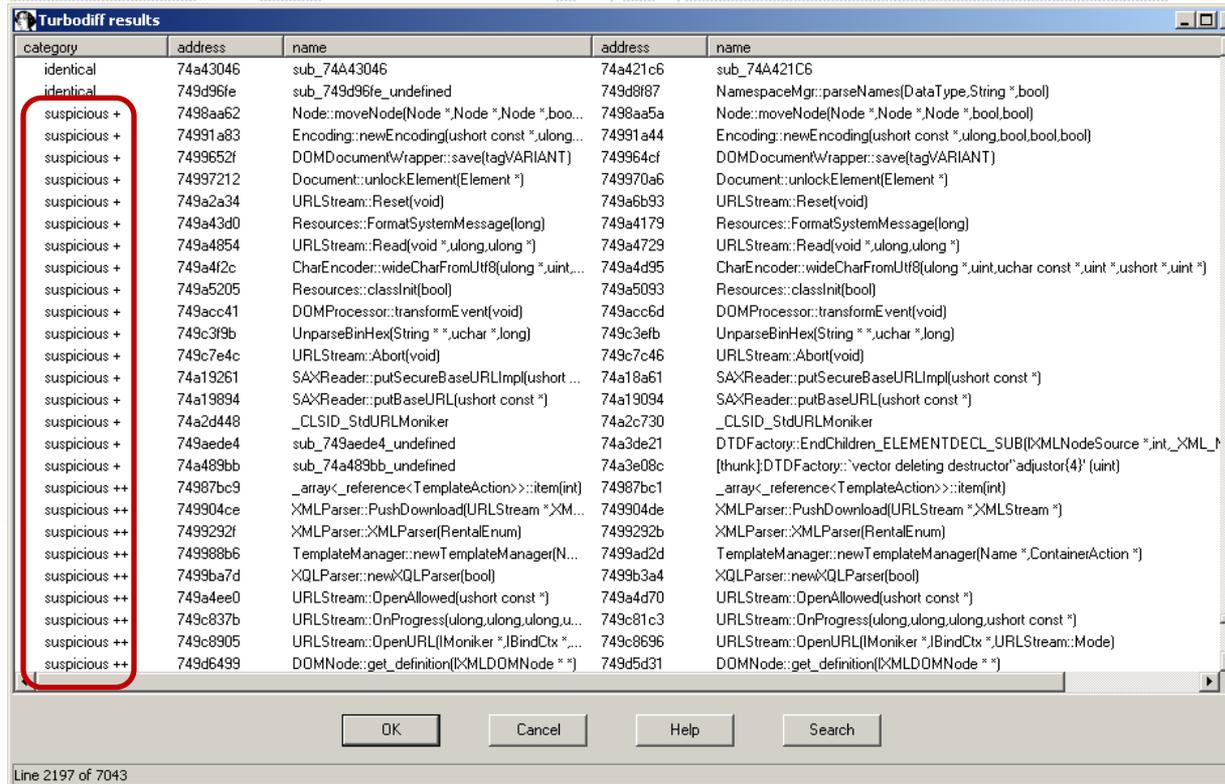

category	address	name	address	name

ebx	0

AFTER RETURNING TO THE  
\_DISPATCHIMPL::INVOKEHELPER  
FUNCTION THE PREVIOUS  
SANITIZED POINTER IS MOVED  
INTO THE EAX REGISTER

```
_DISPATCHIMPL::INVOKEHELPER 749BD7E9 MOV EAX,[EBP-0x14] SS:0023:0013E138=00000000
```

Diagram illustrating a memory move operation. A red box highlights the assembly instruction: `_DISPATCHIMPL::INVOKEHELPER 749BD7E9 MOV EAX,[EBP-0x14] SS:0023:0013E138=00000000`. A red arrow points from the text box above to the instruction. A red line with arrows at both ends connects the memory address `SS:0023:0013E138` to the `[EBP-0x14]` operand, indicating the source of the data being moved into the `EAX` register.

AFTER RETURNING TO THE  
\_DISPATCHIMPL::INVOKEHELPER  
FUNCTION THE PREVIOUS  
SANITIZED POINTER IS MOVED  
INTO THE EAX REGISTER

```
_DISPATCHIMPL::INVOKEHELPER 749BD7E9 MOV EAX,[EBP-0x14] SS:0023:0013E138=00000000
```

```
749BD7EC CMP EAX,EBX
```

AFTER RETURNING TO THE  
\_DISPATCHIMPL::INVOKEHELPER  
FUNCTION THE PREVIOUS  
SANITIZED POINTER IS MOVED  
INTO THE EAX REGISTER

```
_DISPATCHIMPL::INVOKEHELPER 749BD7E9 MOV EAX,[EBP-0x14] SS:0023:0013E138=00000000
```

```
749BD7EC CMP EAX,EBX
```

ebx	0
edx	1
ecx	749d6566
eax	0

AFTER RETURNING TO THE  
\_DISPATCHIMPL::INVOKEHELPER  
FUNCTION THE PREVIOUS  
SANITIZED POINTER IS MOVED  
INTO THE EAX REGISTER

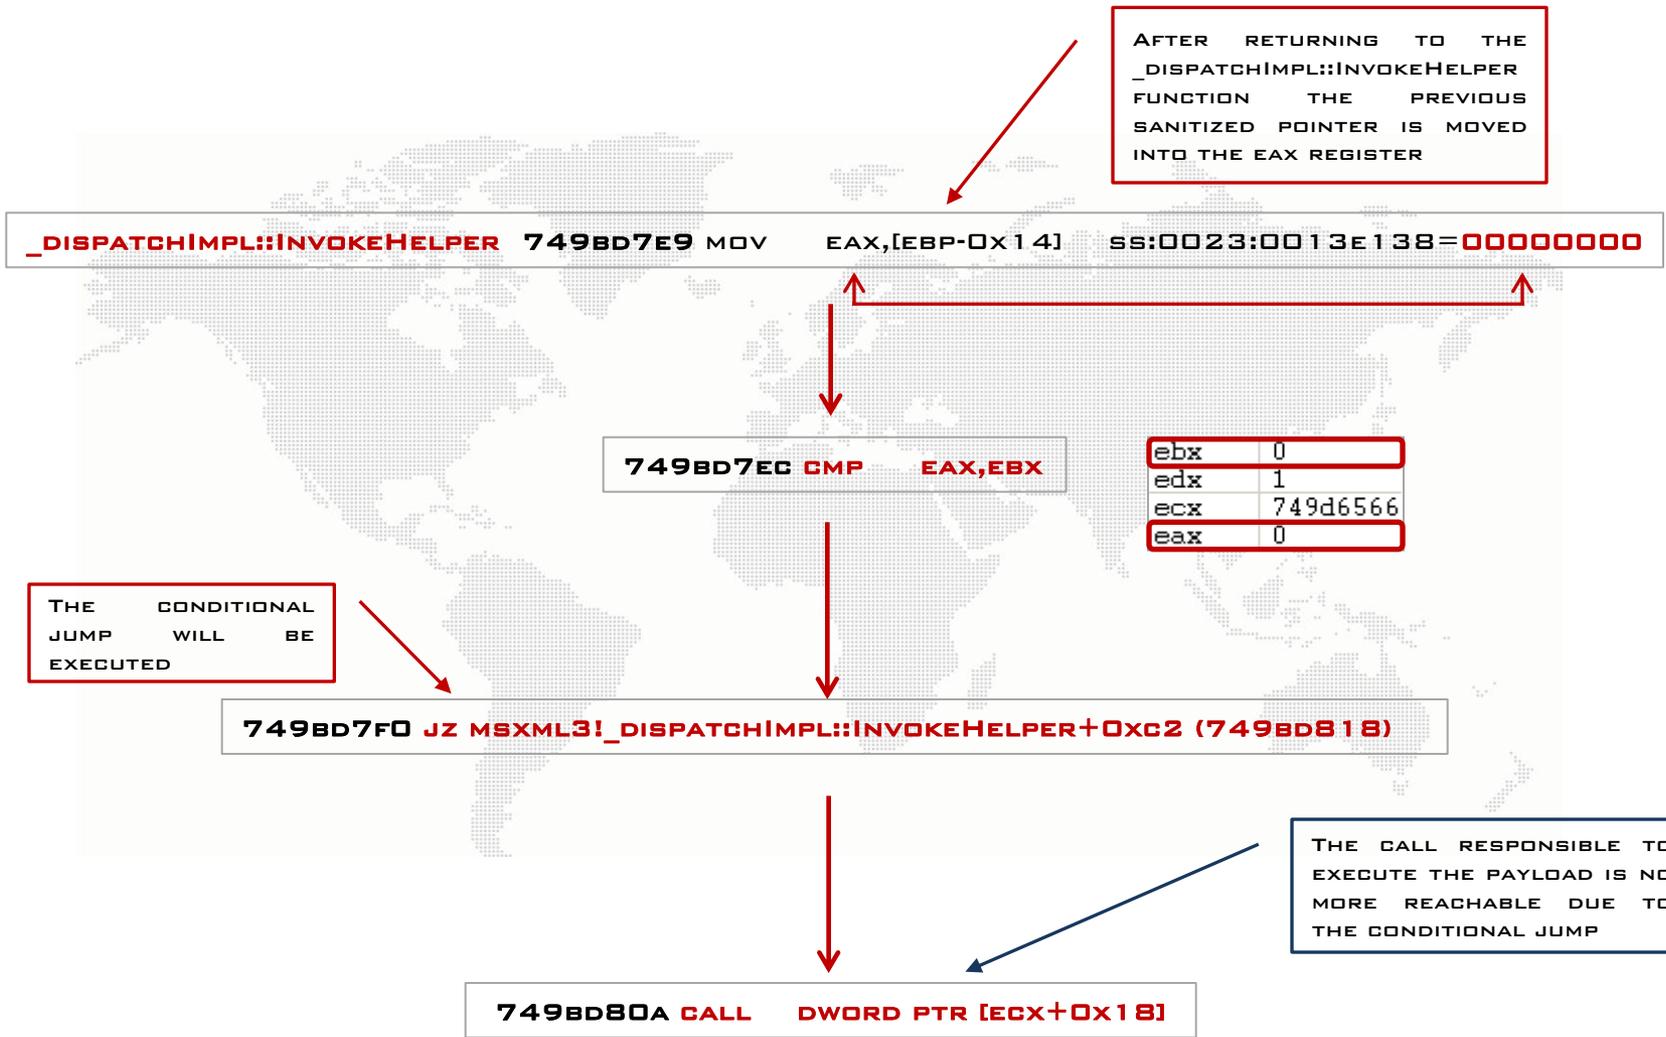

```
_DISPATCHIMPL::INVOKEHELPER 749BD7E9 MOV EAX,[EBP-0x14] SS:0023:0013E138=00000000
```

```
749BD7EC CMP EAX,EBX
```

ebx	0
edx	1
ecx	749d6566
eax	0

THE CONDITIONAL  
JUMP WILL BE  
EXECUTED

```
749BD7FD JZ MSXML3!_DISPATCHIMPL::INVOKEHELPER+0xc2 (749BD818)
```

- AS WE HAVE SEEN THE MAIN CHANGE IN THE XML SECURITY UPDATE FOR WINDOWS XP-SP3 IS THE MOV [EDI],EBX INSTRUCTION.

749D6514    891F    MOV    [EDI],EBX

- THIS INSTRUCTION SANITIZES THE VALUE THAT WILL BE RETRIEVED LATER BY THE `_DISPATCHIMPL::INVOKEHELPER` FUNCTION.
- IF ONE MODIFIES THE TWO BYTES INSTRUCTION (`891F`) WITH NOP'S INSTRUCTIONS (`9090`) THE WHOLE SECURITY UPDATED COULD BE DEACTIVATE.
- APPLY THE SECURITY UPDATE (**KB2719985**) AS SOON AS YOU CAN SINCE THIS VULNERABILITY IS HEAVILY EXPLOITED IN THE WILD NOWADAYS.
